

15.7 The Doppler Effect

1) Sound Waves from a moving source

$S =$ Source

$L =$ listener

$f_s =$ frequency emitted by source

$f_L =$ frequency detected by listener

$v_s =$ speed of the source

$v =$ speed of the waves

For Nancy: $f_n > f_s$

For Pablo: $f_n < f_s$

Moving Source:

$$f_L = \left(\frac{v}{v \pm v_s} \right) f_s$$

Which do you pick - + or - ?

Pick - if $f_L > f_s$ (approaching)

Pick + if $f_L < f_s$ (receding)

Moving Listener

$$f_L = \left(\frac{v \pm v_L}{v} \right) f_s$$

Which do you pick - + or - ?

Pick + if $f_L > f_s$ (approaching)

Pick - if $f_L < f_s$ (receding)

Example: Ch15-doppler-1
